and a multiple sizes*

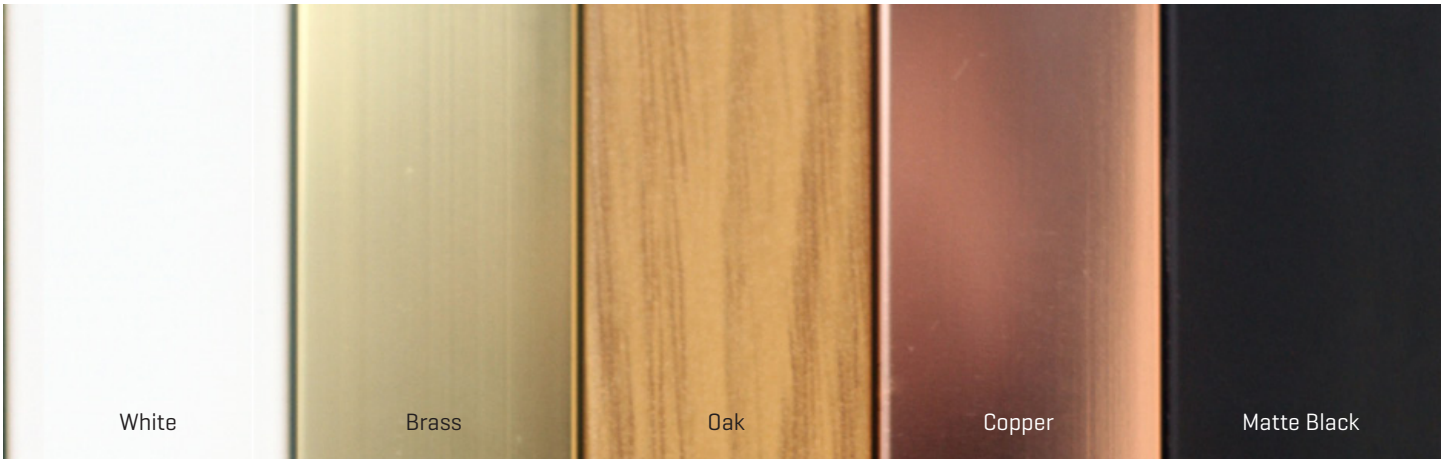

FRAMES

A beautiful frame is an important final touch when decorating your walls with art prints. The frame makes the motif stand out in an exclusive way while it also protects the print against dust, sunlight and wear. At I LOVE MY TYPE we provide frames that combine good quality, a simple and classic look with a reasonable price in the most ideal way.

All our frames are made with a small elegant profile produced in aluminum to secure great durability, low weight and a long life-span. The frames are available in different colors and foils, we even offer a beautiful type in life-like oak foil that outshines the real material in its strength and stability. The slim profile is present on all the different frame types, so they complement each other and can be mixed on your wall of frames.

OPTIONS

The available combinations of color, size and type

CARDBOARD BOXES FOR EASY SHIPPING

We offer our acrylic glass frames in a variant that comes prepacked in two layers of bubble foil in a cardboard box. This option is a great opportunity for shop owners that need to ship frames individually e.g. if you run an online shop. With this option, the only you have to do is add your shipping label to the parcel and then the product is ready to send. The A5 and A4 sizes are not available with the extra wrapping, but due to their light weight these frames can easily be shipped in a normal lined envelop.

TWO KINDS OF GLASS

We offer our frames with two different kinds of glass:
Standard Glass as you normally know it. We have chosen a glass manufacturer that produces high quality glass with perfect reflection of color. Frames with standard glass is best suited for sale in a brick and mortar shops. Frames with standard glass are not suited for regular shipping so we quote prices on orders including frames with standard glass individually.
Acrylic Glass is our other kind of glass. It is a variant of Plexi Glass made of clear styrene. We have chosen a quality that gives minimum reflections and has a high high strength that enables these frames to be shipped by post without any damage. The acrylic glass is also the obvious choice for families with small children, not wanting to risk the danger of shattered glass, should a frame fall from the wall. The acrylic glass comes with a protective foil on both sides, that has to be removed when the client frames the print. When dusting the acrylic glass we recommend that you only use microfiber cloths to prevent scratching the glass.
